

DURAPRESS Cylinder Jackets

Litho Impression and Litho Print Perfecting

Progressive printing ademand the highest performance from all parts of the process to meet today's ever increasing requirements.

The DURAPRESS range of Cylinder Jackets, manufactured in Europe, has been developed for mpression applications for both the original equipment manufacturer and distribution worldwide.

4A - 93

APPLICATION

Litho Impression

- DURAPRESS Cylinder Jackets are fitted to the litho impression cylinder as standard to protect the cylinder on many high quality sheet-fed offset printing presses.
- The Cylinder Jacket will absorb minor damage during printing without damaging the cylinder. The Cylinder Jacket is easily and cheaply replaced and ensures perfect printing every time. The Cylinder Jackets are especially used in numbering and perforating applications.

Litho Print Perfecting –

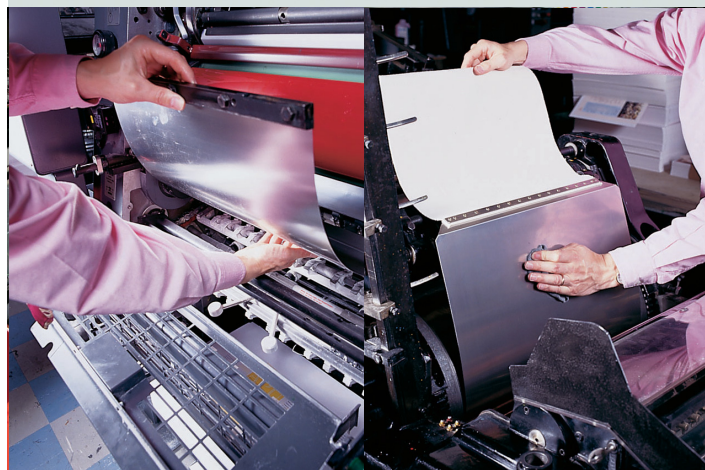

To suit the range of Heidelberg printing equipment

- the latest technology in production enables us to manufacture alternative parts to the traditional suppliers at a lower cost.
- equals high quality at a lower price
- no cracking of the jacket in assembly or removal.
- new hard-wearing surface with efficient ink repelling surface.
- 100% European technology which guarantees quality and performance.
- different thicknesses available according to press requirements.
- specially developed packaging that keeps the product in "mini" condition during transit and all the way to installation on your press.
- our technology can be used to assist you with perfecting problems on other makes of printing press.

RANGE

- Available for litho printing impression and perforating on the following machines:

Heidelberg GTO 46, GTO 52, SM 52, SM 72, SM 74, SM 102, KOR, KORA, KORD 62, KORD 64, KORS, Davidson, Fuji Shinohara, Grampus, Hamada, Hashimoto, Komori, Oliver Sakurai, Roland Praktica, Ryobi.
