

DURAPRESS

Anti Marking Products

Ever advancing print technology demands highly performing anti marking products to guarantee an excellent printing quality required by today's printers. The range of anti marking products, manufactured for print applications, has been developed to eliminate ink smearing, therefore offering a system of maximum performance and to increased productivity.

INK REPELLING BLANKETS

APPLICATION

DURAPRESS Ink Repelling blankets (also known as glass beaded jackets) are the original anti marking system used on the transfer cylinders of offset presses. They have a cloth base with a compressible layer. The glass beads on the surface are an excellent ink repellent and therefore avoid the smearing of ink on the printed sheets.

RANGE

Mainly used on Heidelberg offset presses. The jackets are cut to size to fit each press with notches and Velcro. Can also be supplied with metal bars to fit other presses.

QUALITY

High performance jackets as they are compressible, therefore more resistant to paper jams. They can be used many times and are easily cleaned.

AVAILABILITY

Available for Heidelberg presses SM102 (transfer & delivery), SM72, MO, GTO52, GTO 46. Supplied in black colour as per original specification.

ANTI MARKING FILMS & JACKETS

APPLICATION

- Anti marking polyester films and jackets for use on transfer and delivery cylinders on offset presses to help eliminate ink smearing and set-off onto the printed sheets.
- DURAFILM Anti Marking Films are available in both non adhesive and self adhesive formats.
- Non adhesive is fixed to the cylinder either with 2 clamps or double sided tape.
- Self adhesive, both in small (S type) and large beads (L type), is simply cut to the size of the cylinder and affixed by removing the adhesive backing.
- DURAFILM Anti Marking Jackets are manufactured to the exact size for the press and usually affixed & tensioned using bars and loops at each end of the jacket.

RANGE

- DURAFILM Anti Marking Films are available in S type for paper and high quality printing and L type for carton or general purpose use. Both are produced in self adhesive or non adhesive formats.
- DURAFILM Anti Marking Jackets are produced in non adhesive material, have notches and are fitted onto the cylinder with a metal bar.

QUALITY

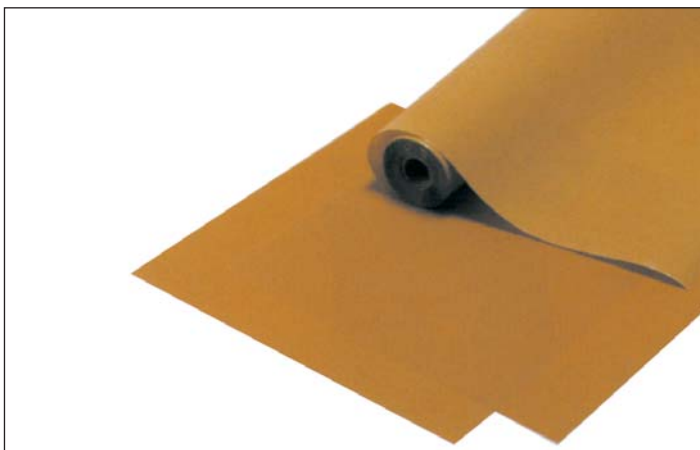

- The surface consists of evenly spread ultra fine glass particles which have been bonded to a PET base film resulting in a stable product of a uniform thickness.
- Both films and jackets can be easily cleaned with standard cleaning solvents consequently lasting longer and bringing high quality and efficiency of anti marking properties in production.

AVAILABILITY

- DURAFILM Anti Marking Film is available in rolls of 1050mm x 50 metres or cut to the required size in sheets (minimum 10 sheets per size).
- DURAFILM Anti Marking Jackets are available for the Heidelberg range of presses GTO, MO and Speedmaster as well as Fuji Shinohara, Oliver Sakurai, Komori and other leading press makes.

ANTI MARKING PAPER

- Anti marking paper (also known as TY Paper) has the same application as the polyester film and is for use on transfer and delivery cylinders on offset presses to help eliminate ink smearing and set-off onto the printed sheets.
- Although coated to be water and grease repellent, the paper is not as durable as the film and needs to be replaced more often.
- It is available in a non-adhesive format in roll or cut to the required size in sheets (minimum 10 sheets per size)

ANTI-MARKING PRODUKTE

TINTEABWEISENDE TÜCHER

Original Anti Marking System auf 3 Transferzylinder
Leicht zu reinigen
Für Heidelberg Maschinen SM102, SM72, MO, GTO52, GTO46

ANTI-MARKING FILMS

Nicht klebender Film: Auf den Zylinder angebracht mit Hilfe von Clips oder doppelseitigen Klebeband
Selbstklebender Film: Auf die jeweiligen Zylindergrößen zugeschnitten

S-Type für Papier und hochwertigen Druck
L-Type für Kartons oder generellen Gebrauch
Leicht zu reinigen

ANTI-MARKING-PAPIER

Hilft das Verschmieren der Tinte zu verhindern
Weniger lang haltbar als der Film

PRODUCTOS ANTI RETINTE

MANTILLAS ANTI RETINTE

Sistema Anti retinte original sobre cilindro de transferencia
Tela base con una capa comprimida
Superficie abalorio para repeler tinta
Cortada a medida para su adaptación a cada máquina con muescas y velcro
Fácil de limpiar
Para Heidelberg SM102 (transferencia y salida), SM72, MO, GTO 52, GTO 46.

FILM & PLANCHAS ANTI RETINTE

Film no adhesivo – ajustado al cilindro con abrazaderas o cinta adhesiva de doble cara.
Film auto adhesivo – cortado a medida del cilindro, colocación adheriendolo al cilindro por la parte adhesiva
Planchas anti retinte – hechas a medida exacta por máquina - y colocada mediante barras y presillas a cada extremo de la plancha
Tipo S para papel y alta calidad de impresión
Tipo L para carton o para uso general
De fácil limpieza con cualquier solvente estandar
Disponibile en rollos de 1050mm x 50 metros o cortado a la medida requerida en láminas (mínimo 10 láminas por medida)

PAPEL ANTI RETINTE

Papel anti retinte – ayuda a eliminar manchas de tinta
Menos duradero que el film
Disponibile en rollos de 1050mm x 50 metros o cortado a la medida requerida en láminas (mínimo 10 láminas por medida)

PRODUITS ANTIMACULANTS

BLANCHETS REPOUSSEURS D'ENCRE

Premier système antimaculant utilisé sur cylindres de transfert
Tissu de base à couches compressibles
Surface en minuscules billes de verre pour repousser l'encre
Coupé au format de chaque presse muni d'encoches et avec velcro.
Tissu facile à nettoyer permettant ré-utilisations
Pour presses Heidelberg (transfert et sortie) SM102, SM72, MO, GTO52, GTO 46.

MANILLES ET PLAQUES ANTIMACULANTES

Manille/Film non adhésif – tenu sur le cylindre soit avec des fixations soit avec un ruban adhésif à double côté.
Manille/Film adhésif – à la taille du cylindre, monté avec le dos auto-collant.
Plaque antimaculante – à la dimension exacte de la presse – fixée avec barres de chaque côté.
Type S pour papier et impression de haute qualité
Type L pour carton ou autres travaux
Facile à nettoyer avec des produits de lavage standards
Disponibile en rouleau de 1050mm x 50 mètres ou au format (minimum 10 feuilles par taille).

PAPIER ANTIMACULANT

Papier antimaculant – aide à éviter et éliminer les taches d'encres
Moins durable que le film
Disponibile en rouleau de 1050mm x 50 mètres ou au format (minimum 10 feuilles par taille)
